Methodology

Latino Decisions surveyed 464 Latino adults in Texas between September 12-20, 2017. Interviews were collected online in a respondent self-administered format, and the survey and invitation was available to respondents in English or Spanish. The full data are weighted to match the adult population in the 2015 Census ACS 1-year data file for age, gender, education, nativity, ancestry, and voter registration status. A post-stratification raking algorithm was used to balance each category within +/- 1 percent of the ACS estimates. The survey carries a margin of error of +/- 4.5 percentage points.
